

The Suncor Burrard Products Terminal is situated on 430 acres of land of which 175 acres are used for terminal operations.

- The Upper Terminal, located in Port Moody, contains the fuel processing units, main tank farm and the fuel blending facilities.
- The Middle Terminal is located on the south side of the Barnet Highway in Burnaby. It contains the secondary tank farm and truck facilities.
- The Lower Terminal is located in Burnaby, Port Moody and along the Burrard Inlet. It contains the marine and rail facilities.

Gasoline, diesel, jet fuel, ethanol, and bio-diesel arrive at the terminal via pipeline, marine tankers, trucks and rail.

Inadvertent Sounding of Emergency Siren

On Monday, July 15th at approximately 6:30 am, the emergency siren was sounded at the Suncor Burrard Products Terminal in Port Moody. The siren was sounded in error while testing other localized emergency shutdown systems.

As part of ensuring the safety of our workers at our facility, Suncor utilizes the siren to notify all workers on site to muster at a safe location in the event of an emergency. The siren is tested regularly at 12:00 noon every other Thursday. There is also unannounced testing at various times through year to test mustering and response times of all workers. If this was a real emergency that impacted the public, a notification would be provided through local emergency services.

At Suncor, we value the relationship we have with our neighbors and will work to minimize the impact of this activity in the future.

We apologize for any inconvenience this may have caused and thank you for your patience.
